NC 6976 0013

STRATH TOLLALDH
Hut Circle

NC60SE 23 6976 0013.

At NC 6976 0013, set into a south-facing hillside, is a hut circle, measuring approximately 9.0m diameter within a wall reduced to a rubble spread 1.5m to 2.0m broad and up to 0.3m high. The entrance is in the SE. The central area of the hut interior is occupied by an amorphous mound, probably spoil from a bothy-type structure associated with a nearby wall abandoned in the 18/19th century. There is no trace of associated cultivation.

Surveyed at 1:10 000.

Visited by OS (J M) 3 December 1980.

NC 60 SE 24

NC 6965 0020

STRATH TOLLALDH
Hut Circles; Small Cairns

NC60SE 24 6965 0020 and 6941 0035.

At NC 6965 0020 and NC 6941 0035, in a south-facing hillside, are two hut circles (A and B respectively) accompanied by a minor field system. 'A', on a natural shelf, measures about 8.5m diameter inside a wall reduced to a heather-obscured rubble spread. The entrance is no longer discernible.

'B', heather-covered, is rather indistinct due to the general amorphous state of its collapsed walling, and the intrusion of a later structure in the interior, but is apparently a 'key-hole' type. The circular main part measures approximately 8.0m across internally opening into an annexe, 5.5m by 5.5m in the northerly arc. The entrance is not now evident. A section of the hut wall indicates a structural width of 2.5m. The minor field system comprises a number of stone clearance heaps, most numerous south-west of hut A. There are no measurable plots.

Surveyed at 1:10 000.

Visited by OS (J M) 3 December 1980.
